

Deep Learning

ICS3308

Assignment 1

1. MLP for regression

Assignment 2

2. Apply CNN to an image data set to show how it lands the classification concept

Assignment 3

Using a suitable application area, and in particular time series data, compare basic RNN and its variant either LSTM or GRU

In short, implement two models - one of the basic RNN or variant and compare the two

Assignment 4

Use hugging face for an NLP task - show the concept of a pretrained model.
